Biosynthesis of various nucleotide sugars
Phenylalanine metabolism
beta-Alanine metabolism
Cyanoamino acid metabolism
Peptidoglycan biosynthesis
Nicotinate and nicotinamide metabolism
ABC transporters
Two-component system
Xylene degradation
RNA degradation
Styrene degradation
Tryptophan metabolism
Quorum sensing
Inositol phosphate metabolism
Pentose phosphate pathway
Pantothenate and CoA biosynthesis
Valine, leucine and isoleucine degradation
Benzoate degradation
Degradation of aromatic compounds
Bacterial chemotaxis
Metabolic pathways
Biosynthesis of secondary metabolites
Bacterial secretion system
Starch and sucrose metabolism
Cysteine and methionine metabolism
Sulfur metabolism
Arginine biosynthesis
Lipoic acid metabolism
Propanoate metabolism
Chloroalkane and chloroalkene degradation
Sulfur cycle
Phosphotransferase system (PTS)
Purine metabolism
Histidine metabolism
D-Amino acid metabolism
Pyrimidine metabolism
Fatty acid metabolism
Carbon metabolism
Other carbon fixation pathways
Arginine and proline metabolism
Nitrogen metabolism
Glycine, serine and threonine metabolism
Biosynthesis of amino acids
Valine, leucine and isoleucine biosynthesis
Phenylalanine, tyrosine and tryptophan biosynthesis
Flagellar assembly
Citrate cycle (TCA cycle)
Ribosome
Pantoea
Burkholderia
